

TO WHOM IT MAY CONCERN

Dear Sirs,

As a member of global leading auxiliaries and chemical manufacturing companies, Bozzetto group is fully committed to meet the requirements suggested by ZDHC MRSL and We share its values with our customers.

In the Zero Discharge of Hazardous Chemicals(ZDHC) Joint Roadmap, Version 2, ZDHC member brands are committed and develop a Manufacturing Restricted Substances List (MRSL) for the apparel and footwear industry. The MRSL addresses hazardous substances potentially used and discharged into the environment during manufacturing and related processes, not just those substances that could be present in finished products.

Since its establishment, Bozzetto has accumulated its capability of how to detect harmful substances by proper investment on our lab and how to control these harmful substances in production. With our years of experience and expertise in business with textile industry, we can support our customers on how to better meet their ecological requirements by providing our eco-friendly products and technical information related. With the commitment to produce eco-friendly products Bozzetto is surviving in mainland Europe with an excellent reputation.

Bozzetto has developed a list of Chemicals which do not contain any of the substances in the priority chemical groups above the limits listed in the ZDHC MRSL (<http://www.roadmaptozero.com/programme-documents.php>) and therefore can be used to supply textiles to Brands that have signed up to the version 2 of the Joint Road Map. This confirmation is valid for the ZDHC MRSL version: October 2014.

We certify that the below listed chemicals are compliant with **H&M MRSL** (H&M Global Chemical Restrictions, Edition Jan 2016). The below lists also qualify for the dyeing, printing and is finished of textiles in compliance with the **H&M RSL** (H&M Global Chemical Restrictions, Edition Jan 2016).

We trust that this information will assist to all our valuable partners in the textile and clothing supply chain. We are open to the declared commitment of H&M in order to achieve the goal. Positive lists of chemicals are mentioned below:

Should you need additional information or clarification, please feel free to contact with us.

Sincerely

Grazia Andreotti

Product Stewardship-Regulatory & Quality Assurance Manager
