To whom it may concern

June 2014

Ref.: ZDHC MRSL 2014.docx

DyStar positive list: Towards Zero Discharge of Hazardous Chemicals (ZDHC) **Products complying with the ZDHC MRSL 2014 published on 5th June 2014**

DyStar[®] has always been committed to the highest standards of product safety and through its econfidence[®] program is actively supporting the objective of removing hazardous chemicals from the textile and clothing supply chain.

The ZDHC Manufacturing Restricted Substance List (MRSL) addresses hazardous substances potentially used and discharged into the environment during manufacturing of textiles and clothing and related processes. It is not limited to those substances that could be present in the finished products.

Based on its econfidence program DyStar has compiled a list of globally marketed textile dyes and auxiliaries that are qualified to support the objective of the Joint Roadmap: Towards Zero Discharge of Hazardous Chemicals.

None of the listed DyStar products use as intentional ingredients any of the chemical substances or substance groups subject to a usage ban as per the ZDHC MRSL 2014:

- Alkylphenols (AP) and Alkylphenol Ethoxylates (APEO)
- Chlorobenzenes & Chlorotoluenes
- Chlorophenols
- Dyes – (Azo (Forming Restricted Amines))*
- Dyes – (Navy Blue Colorant)
- Dyes – (Carcinogenic or Equivalent Concern)
- Dyes – (Disperse (Sensitizing))
- Brominated and chlorinated flame retardants (incl. SCCPs)
- Glycols
- Chlorinated solvents
- Organotin compounds
- Polycyclic aromatic hydrocarbons (PAHs)
- Perfluorinated and Polyfluorinated Chemicals (PFCs)
- Phthalates (including all other esters of ortho-phthalic acid)
- Total Heavy Metals (arsenic, cadmium, mercury, lead, chromium (VI))
- Volatile organic compounds (VOC)

** azo dyes that can undergo reductive cleavage of the azo bond(s) to release carcinogenic amines as defined in Annex XVII of REACH or 2,4- and 2,6-xylidine*

In accordance to our econfidence program all products as listed hereunder are assessed for a possible risk of contamination (induced by e.g. by-products in synthesis or by raw materials) and –where appropriate- monitoring routines are in place to guarantee that thresholds as given for Group B: Chemical Supplier Formulation Limit in the MRSL will not be exceeded.

We trust that this information will be of assistance to all our partners in the textile and clothing supply chain.

With best regards
DyStar Colours Distribution GmbH

Technology
Global Product Safety & Ecology

Dr. Christine Lorkowski
Technology
Global Product Safety & Ecology

This declaration is based on our general experience and tests on samples of typical manufacture. It does not absolve the user from making own tests and controls to ensure that his finished textile article conforms to the requirements he has to meet.
